The present invention describes therapeutic applications of mature FLINT (mFLINT) for use in the treatment of acute liver failure. Mature FLINT (mFLINT) which is a member of the tumour necrosis factor receptor superfamily, is used for treating acute liver failure, inflammation of the liver, abnormal hepatocyte apoptosis, sepsis, a disorder associated with inflammation, hepatitis, abnormal apoptosis, an ischaemia-associated injury or disorder such as hypercoagulation (including use with thrombolytic or anti-thrombolytic agents), reperfusion-associated injury or disorder, Type I diabetes, cancer, cell damage to an innocent bystander tissue that is induced by a chemotherapeutic agent or therapeutic irradiation, treating haematopoietic progenitor cells that have been exposed to therapeutic radiation or chemotherapy, aplastic anaemia, myelodysplastic syndrome or a pancytopenic condition. mFLINT is also used for promoting the growth or differentiation of a haematopoietic progenitor cell or CD34 cell and preventing damage to a cardiac myocyte resulting from abnormal myocardial ischaemia. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; FAS Ligand Inhibitory Protein; FLINT; analogue; apoptosis; tumour necrosis factor receptor; acute lung injury; pulmonary fibrosis; acute respiratory distress syndrome; ulcerative colitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

                                                                                                    The present sequence represents a mature numan ray receptor Protein (FLINT). FLINT is a homologue of tumour necrosis factor receptor proteins. FLINT inhibits the binding of FAS to FAS ligand. The mature FLINT protein is modified to produce analogues, which have greater potency, longer in vivo half-lives, decreased aggregation, decreased absorption onto surfaces, increased solubility and improved ease of formulation. The FLINT analogue is useful for treating a patient suffering from disease or condition relating to abnormal apoptosis such as acute lung injury, acute respiratory distress syndrome, pulmonary fibrosis, chronic obstructive pulmonary disease, ulcerative colitis, or

The present sequence is that of human FAS ligand inhibitory protein FLINT mature protein. FLINT is a tumour necrosis factor receptor homologue that binds FAS ligand, preventing its interaction with homologue that binds FAS ligand, preventing its interaction with lands and is implicated in runaway apoptosis and inflammatory disease. FLINT also binds to LIGHT, a membrane-bound ligand, which may play a role in immune modulation and apoptosis.

The invention relates to novel FLINT analogues (see also AAB19706-09) that are resistant to proteolysis by trypsin-like proteases between positions 218 and 219 of the FLINT mature protein sequence. The analogues have amino acids substitutions in the region comprising amino acids substitutions in the region comprising residues 34, 36, 132, 194 and/or 196. Nucleic acids, vectors and transformed host cells for recombinant production of the analogues are claimed. FLINT conduction of the analogues introducing the required point mutations. The protease resistant FLINT analogues are used to prevent or treat acute lung injury, acute respiratory stress syndrome, ulcerative colitis, chronic obstructive pulmonary disease, pulmonary fibrosis, to inhibit T lymphocyte activation, and to facilitate organ preservation for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel protease resistant FAS ligand inhibitory protein analogues resistant to in vivo or in vitro proteolysis at amino acid position 218 of the mature protein, useful for treating autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    100.0%; Score 1491; DB 21; Length 271; 100.0%; Pred. The M68 protein is a member of a family of proteins which have roles in immune responses, cell death, cell proliferation and stimulation of cell differentiation. M68 lacks a transmembrane domain stimulation of cell differentiation. M68 lacks a transmembrane domain and is a secrete factor suggesting that it functions as a natural inhibitor for its ligand. The altered expression pattern of M68 in a multitude of tissues suggests that M68 may play a role in cancer by binding to its ligand and blocking apoptotic cell death induced by such a ligand. This anti-apoptopic role of M68 suggests that modulators of M68 will be useful in treatment of apoptosis-related diseases such as various forms of cancer and various bone disorders. M68 nucleic acids and proteins are therefore useful for treating conditions involving atypical apoptosis and for identifying cancer and other diseases associated with abnormal levels of

Mature FLIMT (mFLINT) inhibits FasL-Fas mediated apoptotic and pro-inflammatory activity. mFLINT is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 8; Fig 3; 125pp; English

The present sequence is human mature fas ligand inhibitory protein CC (FLINT). FLINT, a homologue of tumour necrosis factor receptor correction of Pask with fas. ligand (Fask) and thereby preventing the interaction of Fask with fas. FLINT comprising O-linked or N-linked or N-linked or Oligosaccharides is useful for preventing or treating acute lung injury (ALI), acute respiratory distress syndrome (ARDS), ulcerative colitis, chronic obstructive pulmonary disease (COPD) and pulmonary fibrosis (PP), to facilitate organ preservation for transplantation and to inhibit T or lymphocyte activation. FLINT is useful for treating and/or preventing diseases such as rheumatoid arthritis, fibroproliferative lung disease, fibrotic lung disease, acute lung injury, chronic renal failure, graft-vs-host disease, cutaneous inflammation, vascular leak syndrome, const disease, cutaneous inflammation, vascular leak syndrome, constance mellitus (IDDM), osteoporosis, inflammatory bowel disease, crohm's disease, sepais, pancreatitis, cancer, autoimmune disease such as postiasis, Down's syndrome, and multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                     New FLINT polypeptide for treating and/or preventing acute lung injury, acute respiratory distress syndrome, ulcerative colitis, and graft-versus-host disease, comprises O-linked or N-linked

The present sequence represents a mature FLINT (FAS Ligand Inhibitory Protein) polypeptide. The specification describers a composition comprising a divalent metal cation and FLINT protein. The composition is used either for reducing, reversing or eliminating aggregation and precipitation of FLINT or for inducing oligomerisation or aggregation of FLINT molecules. They can be used for purifying FLINT and/or maintaining FLINT in solution. The compositions are used to treat and/or prevent disorders associated with the binding of Fas to Fast and/or LIGHT to the LTbetaR and/or FRZ/HVEM receptors. Uses include the treatment of acute liver failure and cerebral ischemia and the prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compositions comprising a divalent metal cation and a FAS Ligand Inhibitory Protein (FLINT), for reducing or inducing aggregation of FLINT and for treating diseases involving FasL/Fas and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a human mature FLINT (FAS Ligand Inhibitory Protein) polypeptide. The specification describers a composition comprising a divalent metal cation and FLINT protein. The composition is used either for reducing, reversing or eliminating aggregation and precipitation of FLINT or for inducing oligomerisation or aggregation of FLINT molecules. They can be used for purifying FLINT and/or maintaining FLINT in solution. The compositions are used to treat and/or prevent disorders associated with the binding of Fas to FasL and/or LIGHT to the LTDetaR and/or TR2/HVEM receptors. Uses include the treatment of acute liver failure and cerebral ischemia and the prevention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Compositions comprising a divalent metal cation and a FAS Ligand Inhibitory Protein (FLINT), for reducing or inducing aggregation FLINT and for treating diseases involving Fast/Fas and/or LIGHT/LT-beta-R receptor interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              31-AUG-2000; 2000WO-US20805

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a composition comprising a divalent metal cation associated with a protease resistant Fas ligand inhibitory protein (FLINT) analogue. The composition is useful in the treatment of diseases associated with Fas binding to its ligand, such as acute liver failure, inflammatory diseases, cerebral ischaemia and apoptosis. The present sequence is the mature FLINT protein.

This is the amino acid sequence of the human tumour necrosis related receptor (TR4), used in the method of the invention. The TR4 protein or its agonist can be used to treat a subject in need of enhanced TR4 polypeptide activity. The antagonist is used to inhibit TR4 polypeptide activity. The active agents can be used for the treatment and prevention of diseases such as chronic and acute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                inflammation, arthritis, septicaemia, autoimmune diseases, transplant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     YCNVLCGEREEEARACHATHNRACRCRTGFFAHAGFCLEHASCPPGAGVIAPGTPSQNTQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a new method of administering FLINT analogs that involves pulmonary administration of a therapeutic amount of the FLINT or FLINT analog. The method enables systemic absorption of FLINT through lungs and significantly reduces or eliminates the need for administering FLINT by injection or other routes of administration. The method is useful in treating disorders related to enhanced apoptosis (e.g. organ failure in liver, kidneys and pancreas) and inflammatory diseases associated with neutrophil activation (e.g. sepsis, acute respiratory distress syndrome, acute lung injury, systemic inflammatory response syndrome (SIRS) and multiphe organ dysfunction (MODS)). The method minimises the pain and disconfort of injection methods. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Administering FLINT (FAS ligand inhibitory protein) or FLINT analog, useful for treating e.g. sepsis or respiratory distress syndrome, involves pulmonary administration of a therapeutic amount of the FLINT or FLINT analog -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 YCNVLCGEREEEARACHATHNRACRCRTGFFAHAGFCLEHASCPPGAGVIAPGTPSQNTQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                     The present sequence represents the human tumour necrosis factor receptor-6 alpha (TNFR-6 alpha) protein. The invention also provides for the TNFR-6 beta protein (AAW63023). TNFR-6 alpha and TNFR-6 beta are members of the tumour necrosis factor receptor (TNFR) family. TNFRs are expressed in endothelial cells, keratinocytes, normal prostate and prostate tumour tissue. For a number of disorders of these cells, particularly of the immune system, substantially altered (whether increased or decreased) levels of TNFR-6 alpha and/or TNFR-6 beta gene expression can be detected, therefore the TNFR-6 alpha and TNFR-6 beta polypeptides, nucleic acids and antibodies are claimed to be useful in the diagnosis of such disorders. Mutations of the TNFR 6 alpha and TNFR-6 beta genes can also be detected. The TNFR polypeptides are also claimed to be useful for identifying ligands which may be useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide

expressed from a gene therapy vector) in conditions associated with a deficit of (1). Ab are used: (a) for qualitative or quantitative or deficit of (1). Ab are used: (a) for qualitative or quantitative or detection of (1) in standard immunoassays (for diagnosis of disease, or susceptibility, or for monitoring); and (b) as therapeutic inhibitors in cases where (1) is overexpressed. Nucleic acid (11) that encodes (1) is overexpressed. Nucleic acid (11) that encodes (1) is overexpressed. Nucleic acid (11) that encodes (1) is overexpressed on application assays; (C) as source of antiennes molecules or ribozymes; and (b) to produce transgenic animals (for studying (patho) physiology of (1)). Diseases possibly associated with under- or over-expression of (1) are those of the immune, osteogenic, cardiovascular and central or peripheral nervous systems, commons, transplant incompatibility, asthma and rheumatoid arthritis. The products of the invention have antitumor, antiasthmatic and antitumior, antiasthmatic and incurred the invention have antitumor, antiasthmatic and antiarthritic activity. This sequence represents the TNF-receptor of the

The present invention describes therapeutic applications of mature FLINT (mFLINT) for use in the treatment of acute liver failure. Mature FLINT (mFLINT), which is a member of the tumour necrosis factor receptor superfamily, is used for treating acute liver failure, inflammation of the liver, abnormal apoptosis, a disorder associated with inflammation, hepatitis, abnormal apoptosis, an ischaemia-associated injury or disorder such as hypercogulation (including use with thrombolytic or anti-thrombolytic agents), reperfusion-associated injury or disorder, Type I diabetes, cancer, cell damage or damage to an therapeutic irradiation, treating heematopoietic progenitor cells that have been exposed to therapeutic radiation or chemotherapy, aplastic anaemia, myelodysplastic syndrome or a pancytopenic condition. mFLINT is also used for promoting the growth or differentiation of a haematopoietic progenitor cell or CD34+ cell and preventing damage to a cardiac mycorte progenitor cell or CD34+ cell and preventing damage to a cardiac mycorte progenitor cell or DM34+ cell and preventing damage to a cardiac mycorte progenitor mellong from abnormal myocardial ischaemia. OPG-2, is a member of the tumour necrosis factor receptor family, and can be used: (i) to raise specific antibodies (Ab), (ii) to treat osteopenic disorders associated with excessive osteoclast activity, e.g. primary osteoporosis, Paget's disease, hyperglycaemia of malignancy, or osteolytic metastases; (iii) for affinity purification of cognate ligands, and (iv) to screen for ligands (antagonists or agonists). Ab, or other OPG-2 blocking agents such as soluble forms of the protein, are used to prevent, or reduce severity of, an immune response, and for treating cancer. They can also be used in diagnostic assays. The nucleic acid sequence encoding OPG-2 can be used as a probe to isolate related sequences from other species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 1999-347693/29.
